San Miguel, Bulacan, Philippines

Professional Summary

Information Technology student with hands-on experience in software development, system implementation, database management, troubleshooting, and IT project coordination. Skilled in translating business requirements into practical technical solutions, managing development tasks, and supporting system deployment. Strong communication, problem-solving, and analytical skills, with an interest in systems implementation and project management.

Work Experience

NRivera Skin Specialists — San Juan, San Miguel, Bulacan September 2026
Software Developer / IT Project Developer
Freelance Project

- Developed and deployed an offline clinic POS and inventory management system using Electron, Express.js, SQLite, and EJS.
- Implemented barcode scanning, sales processing, inventory management, product and doctor management, reporting, and data import/export.
- Utilized AI-assisted software development to support coding, debugging, system design, and development workflows while independently implementing and validating the resulting solutions.

Daversity Corp. – Fairlight Luminaires – Parañaque City, Philippines October 2026
Software Developer/IT Project Developer
Remote Freelance Project

- Developed a Windows desktop-based inventory management system with barcode support for product tracking and inventory operations.
- Coordinated with the client remotely to gather requirements, provide project updates, address feedback, and implement requested improvements.
- Utilized AI-assisted software development for coding, debugging, and problem-solving while managing technical decisions, implementation, and solution validation.

Selected Project

Evacuation Mapping Solution — Project Manager / Developer September 2026 - Present
Bulacan Agricultural State College

- Led the development of a web-based evacuation mapping solution for the Office of the Municipal Disaster Risk Reduction and Management Officer of San Ildefonso, Bulacan.
- Coordinated project planning, requirements gathering, development, testing, and documentation.
- Contributed to PHP/MySQL development, mapping and routing functionality, evacuation-center management, and system integration.
- Coordinated system evaluation and stakeholder feedback for the completed solution.
